# Teaching Center Setup Information

Recommended Retail Teaching Center: The physical setup for a Retail location is shown below. ModelGolf will work with facilities that cannot comply with these space requirements.

Retail Teaching Center Notes:

1. All measurements are from the center of the object (golf ball, camera lens, etc.).
2. High speed Internet access is required at the Computer Teaching System (such as DSL or cable modem). The minimum speed required is 128 kilobits per second download and upload. Internet access must be tested prior to System installation. Internet access settings must be available at the time of the System installation (IP address, DNS servers, gateway, etc.).
3. Electrical outlet requirements at the Computer Teaching System unit are 120 volts with two 15-amp plugs.
4. An uninterruptible power supply (such as those manufactured by APS) is required for the Computer Teaching System. Protection must include both power and Internet lines.
5. Back Camera is aligned to Center focal point (denoted by large X on the hitting pad) and Target.
6. Side Camera is aligned to Center focal point (denoted by large X on the hitting pad) and Ball.

Additional Requirements:

In addition to the Computer Teaching System, a separate Internet computer should be available for students to become Members, as well as access their Programs.
